

Geography is about  
the world, its people,  
places and where we  
live.

# Geography

At Hollyfield Primary School, geography is a vital part of our curriculum, helping to develop curious and responsible citizens. Our engaging lessons, combined with fieldwork and links to other subjects, help children understand the world around them, including its people, places, and environments.

Using the Kapow Primary geography scheme, we aim to provide children with knowledge about different places, cultures, and resources. Our goals include inspiring curiosity and building confident geographers. We focus on developing essential geographical skills and encouraging children to understand how geography impacts their lives locally and globally.

Geography is taught through a carefully planned programme that revisits important knowledge and skills, ensuring clear progression in four areas: locational knowledge, place knowledge, human and physical geography, and geographical skills and fieldwork.

We ensure that pupils develop strong mapping skills, conduct independent research and appreciate the relationship between physical geography and human activities. Our aim is to prepare children to thrive in an interconnected world.
